

1.)Hyundai Glovis, BYD join forces on car shipping, logistics

South Korean logistics company Hyundai Glovis, part of the Hyundai Motor Group, has signed a memorandum of understanding (MoU) with BYD, China's largest electric vehicle manufacturer, to cooperate on logistics and finished vehicle maritime transportation.

As per agreement signed on September 25, 2024, Hyundai Glovis intends to share its pure car and truck carriers (PCTCs) and global container logistics infrastructure with BYD.

In the logistics sector, the parties will explore collaboration in the container forwarding business utilizing Hyundai Glovis' global logistics infrastructure/network. Forwarding refers to a cargo transportation specialist taking responsibility for and handling the entire transportation process from departure to arrival of cargo.

In the finished vehicle maritime transportation sector, they will review collaboration in which they will jointly utilize the ship space of car carriers currently owned by BYD.

In addition, the possibility of maritime transport of BYD finished vehicle exports via Hyundai Glovis' car carriers will be reviewed in the mid to long term.

At the '2024 CEO Investor Day' held in June, Hyundai Glovis announced plans to increase the non-affiliate sales ratio of the finished vehicle maritime transport sector to 50% over the next five years. The plan is to prioritize the transport of affiliated volumes but also increase sales growth by collaborating with non-affiliate customers. To this end, the fleet is expected to increase from the current 90 vessels to 128 vessels by 2030.

In May 2024, Hyundai Glovis ordered six 10,800 CEU LNG dual-fuel pure car and truck carriers (PCTCs) in China. The six-ship order is part of a batch of 10,000 CEU dual-fuel car carriers to be built by Guangzhou Shipyard International (GSI), part of China State Shipbuilding Corporation (CSSC), and operated by Hyundai Glovis.

2.)Hyundai Glovis to invest \$750 million in LNG-fueled car carriers

Due to an anticipated improvement in earnings, Hyundai Glovis Co plans to invest \$750 million in six new liquefied natural gas (LNG) dual-fuel car carriers.

According to Korean Economic Daily (KED), Hyundai Glovis Co. anticipates an improvement in earnings this year compared to last year, following a first-quarter report that exceeded expectations in both sales and operating profit. This success is largely attributed to heightened inland delivery of finished cars in overseas markets and the favorable conditions of high car shipping rates.

Consequently, as mentioned, Hyundai Glovis unveiled plans to invest \$750 million in constructing six new liquefied natural gas (LNG) dual-fuel vessels. Each vessel is capable of carrying 10,800 vehicles. The company aims to receive all six ships by the end of 2028.

"We have decided to order more ships to ensure stable shipping and logistics services for our strategically important global clients in the mid-to-long term"

3.)Hyundai Glovis, China's BYD sign MOU for logistics partnership

SEOUL, Sept. 25 (Yonhap) -- Hyundai Glovis Co., the logistics unit of Hyundai Motor Group, said Wednesday it has signed an initial pact with Chinese electric automaker BYD for partnership in the logistics business.

Under the "strategic" memorandum of understanding, the two companies will cooperate in global logistics forwarding services and share vessel space to ship vehicles using each other's vessels, Hyundai Glovis said in a statement.

"In the long term, (Hyundai Glovis) will consider shipping BYD's vehicles for exports using our (pure car and truck carriers) under the partnership," it said.

Hyundai Glovis earns about 60 percent of sales in its vehicle shipping division by delivering cars made by its affiliates Hyundai Motor Co. and Kia Corp., with the remainder coming from deals with other entities.

The company said it aims to increase the ratio of sales earned from non-affiliated clients to 50 percent by 2030.

4.)Hyundai Glovis to build logistics complex in Korea's top port city

The company to expand its services to include not only auto parts, EV batteries but also refrigerated cargo, other items

Hyundai Glovis Co., the logistics unit of the world's third-largest carmaker Hyundai Motor Group, plans to establish a logistics complex in Busan, South Korea's biggest port city, to expand its business of non-automotive items and non-affiliated customers' products.

Hyundai Glovis said on Wednesday that it has signed a deal to buy land of 94,938 square meters (1 million square feet) in the hinterland behind Busan New Port. The value is known to exceed 100 billion won, according to industry sources in Seoul, although the company has yet to disclose financial details.

The company plans to build container yards and a comprehensive logistics center on the land by 2027.

"We aim to improve maritime forwarding competitiveness through the comprehensive infrastructure in the country's largest port, Busan New

Port,” said a Hyundai Glovis official. “We can also expand the business of the new facility into the nearby Jinhae New Port under development.”

TO EXPAND BUSINESS

The new complex is set to allow Hyundai Glovis to store as many containers as it wants in the yards and streamline all services for import containers including inspections and storage. The company can also tailor the structure and function of the facility to meet the needs of individual customers.

Hyundai Glovis plans to expand its services to include not only auto parts and electric vehicle batteries but also refrigerated cargo and other products of non-affiliated companies by setting up its own logistics centers at major harbors and airports.

The company is building a 44,420-square-meter logistics center at Incheon International Airport, South Korea’s main gateway, to complete its construction next year.

The center is to be equipped with a sorting system and a customs clearance facility to handle global e-commerce cargo.

5.)Hyundai Glovis to install new EV fire-fighting device

Hyundai Glovis Company, the shipping unit of South Korean automaker Hyundai Motor Group, announced this week that it plans to introduce a fire suppression device specifically designed to extinguish electric vehicle (EV) battery fires on its car-carrier vessels.

The move comes amid rising concerns in South Korea and elsewhere over the safety of electric vehicle batteries, following a series of spontaneous fires in the last year—some of which have had devastating consequences. Car-carrying vessels have the capacity to transport thousands of vehicles at a time, all tightly parked next to each other.

Hyundai Glovis has developed a purpose-designed tool, the EV Drill Lance, for use on its car carriers. In the case of a fire, the device drills through the underside of the vehicle to reach the battery pack, which it then sprays to extinguish the fire. The device uses water from the ships’ fire hydrants, which is fed through a hose to power a turbine that drives the drill and then puts out the fire.

The company aims to initially install these devices on the 32 car carriers it owns directly before making them available on its chartered vessels. As of the end of 2023, the company had more than 90 car carriers in operation around the world.

"Hyundai Glovis to install new EV fire-fighting device" was originally created and published by Just Auto, a GlobalData owned brand.
